Installation sequence

1. Insert the required number of extension cables A-98-9134 into the bars. Where required, combine them with the splitter A-98-9132.
2. Connect the LED spots A-98-9110 and click them into place.
3. Place the prepared light beams close to their final position. Connect the extension cables to the distributor cables A-98-9133 and the driver A-98-9120 (or A-98-9121).
4. Use the waterproof end cap (A-98-9150) where no spotlight or other cable is connected to keep the circuit waterproof.

Product installation must be performed by qualified personnel only!
